EXPERIENCE

Laravel Developer
IWeTechs

📅 Jan 2021 – Present

- As a developer proficient in both Laravel and Symfony, I work on creating and managing web applications using these popular PHP frameworks. My role involves:

  1. **Laravel Development:** Building and maintaining web applications, implementing features, and integrating services like payment gateways (e.g., PayPal) and Google Ads. I focus on crafting scalable and efficient solutions, optimizing performance, and ensuring a seamless user experience.

  2. **Symfony Development:** Developing complex applications, leveraging Symfony's robust architecture, and utilizing its extensive set of components. This includes configuring translation systems, managing routing, and integrating with various third-party services.

  My expertise spans core PHP, enabling me to easily work with both frameworks, adapt to different project requirements, and deliver high-quality, reliable solutions.

PROJECTS

Zorix
Laravel, ReactJs, Mysql, Elastic Search

- **Back-End:**
  1. Php, Laravel, Mysql, Elastic Search
- **Front-End:**
  1. React, Redux

- -
